

Athlete Body Plan

Build strength, speed, agility, and conditioning like an athlete.

30-Day Plan

Overview

This plan blends strength training, plyometrics, and conditioning to build a functional, athletic physique - useful power and speed, not just muscle size.

Your Weekly Training Split

Repeat this 7-day split each week for the full program, adjusting effort according to the phase guide below.

Day 1 - Strength + Power

Exercise	Sets	Reps / Duration
Squat Jumps	4	8
Squats	4	8-10
Push-ups (explosive)	3	10
Medicine Ball Slams (or weighted throws)	3	10

Day 2 - Speed + Agility

Exercise	Sets	Reps / Duration
Sprint Intervals	6	20-30 sec sprint / 60 sec rest

Lateral Shuffles	4	20 sec
High Knees	3	20 sec
Butt Kicks	3	20 sec

Day 3 - Active Recovery + Mobility

Exercise	Sets	Reps / Duration
Dynamic Stretching	1	15 min
Easy Walk or Swim	1	20 min

Day 4 - Upper Body Strength

Exercise	Sets	Reps / Duration
Pull-ups or Rows	4	8-10
Push-ups or Bench Press	4	10
Overhead Press	3	10
Plank to Push-up	3	10

Day 5 - Conditioning Circuit

Exercise	Sets	Reps / Duration
Burpees	4	10
Kettlebell / Dumbbell Swings	4	15
Box Jumps or Step-ups	4	10
Battle Ropes or Fast Mountain Climbers	4	30 sec

Day 6 - Lower Body Power

Exercise	Sets	Reps / Duration
Bulgarian Split Squats	4	10 each leg
Broad Jumps	3	6
Single-leg Romanian Deadlifts	4	10 each leg
Calf Raises	3	15

Day 7 - Rest

Exercise	Sets	Reps / Duration
Full Rest or Light Stretching		-

Progression Phases

Phase	Focus
Week 1	Foundation - learn the movements, use lighter effort,
Week 2	Build - increase effort/weight slightly, same exercises
Week 3	Progress - add reps or intensity where you feel strong
Week 4	Push - aim for your best effort, then take extra rest at

Nutrition Guidelines

- Eat around maintenance calories, adjusting slightly based on how your body composition responds.
- Prioritize protein (1.6-2.0 g/kg) alongside enough carbs to fuel high-intensity training.
- Hydrate well before, during, and after conditioning sessions - performance drops fast with dehydration.
- Include anti-inflammatory foods (fatty fish, berries, leafy greens) to support recovery between hard sessions.
- Time carbs around training for energy and recovery, especially on speed/conditioning days.

Key Tips

- Warm up thoroughly before power and speed work - explosive movements carry higher injury risk when cold.

- Quality over quantity on plyometric and sprint work - stop a set if form breaks down.
- Build in a deload (lighter) week every 4-6 weeks to avoid burnout and overuse injuries.

General guidance only - not a substitute for advice from a qualified coach, trainer, or doctor. Listen to your body and adjust intensity as needed.
