

Muscle Build Plan

A hypertrophy-focused split to maximize muscle growth.

1-Week Plan

Overview

This plan uses a push/pull/legs style split with moderate-to-high volume, targeting each muscle group with enough training stimulus to grow while allowing adequate recovery between sessions.

Daily Schedule

Day 1 - Push (Chest, Shoulders, Triceps)

Exercise	Sets	Reps / Duration
Push-ups or Bench Press	4	10-12
Dumbbell Shoulder Press	4	10-12
Incline Push-ups	3	12
Lateral Raises	3	12-15
Tricep Dips	3	12

Day 2 - Pull (Back, Biceps)

Exercise	Sets	Reps / Duration
Pull-ups or Assisted Pull-ups	4	8-10
Bent-over Rows	4	10-12

Face Pulls or Band Rows	3	15
Bicep Curls	3	12
Hammer Curls	3	12

Day 3 - Legs

Exercise	Sets	Reps / Duration
Squats	4	10-12
Romanian Deadlifts	3	10
Walking Lunges	3	12 each leg
Calf Raises	4	15
Leg Raises (core)	3	12

Day 4 - Rest / Mobility

Exercise	Sets	Reps / Duration
Stretching / Foam Rolling	1	15-20 min

Day 5 - Push (Volume Focus)

Exercise	Sets	Reps / Duration
Dumbbell Bench Press or Push-ups	4	10-12
Arnold Press	3	10-12
Cable or Band Chest Fly	3	12-15
Overhead Tricep Extension	3	12

Day 6 - Pull + Legs (Volume Focus)

Exercise	Sets	Reps / Duration
Deadlifts (moderate)	3	8
Lat Pulldown or Pull-ups	3	10
Bulgarian Split Squats	3	10 each leg
Plank	3	40-60 sec

Day 7 - Rest

Exercise	Sets	Reps / Duration
Full Rest	-	-

Nutrition Guidelines

- Eat at maintenance or a slight surplus (roughly 200-300 kcal) to fuel muscle growth without excess fat gain.
- Target 1.6-2.2 g of protein per kg body weight daily, spread evenly across meals.
- Time a protein-rich meal or snack within a couple hours of training.
- Carbs support training intensity - don't cut them too low if muscle growth is the priority.
- Stay consistent for at least 8-12 weeks before judging results; hypertrophy is a slow, steady process.

Key Tips

- Focus on progressive overload - track your lifts and aim to beat your previous numbers over time.
- Control the eccentric (lowering) phase of each rep for better muscle tension.
- Allow 48 hours before training the same muscle group again for adequate recovery.

General guidance only - not a substitute for advice from a qualified coach, trainer, or doctor. Listen to your body and adjust intensity as needed.
